## Easy way to make origami claws

Fold down the to right corner until edge matches the left side of paper. Fold down top left corner now to form a triangle shape. Fold up bottom corners until edges meet and forms the shape shown. Fold up bottom portion up over upper triangle area. Rotate paper upside down. Take right portion and fold until right edge is aligned in the middle of the triangle portion. Fold the newly folded section over once. Fold over once more. On opposite side, tuck in the loose slip of paper into the pocket available. Tuck in firmly and crease. Insert finger into space in flap. Make 4 more, and slip on, and enjoy your claws. Learn how to make an origami claws with instructions below.Difficulty: Easy! Put on these origami claws and watch everybody run away with fear! That's not really going to happen, but you can really take care of any itch someone has one. You'll need a piece of paper for every finger, but these are very easy to make. Step 1: Start with a square sheet of origami paper. If you only have regular rectangular paper, follow instructions on how to make origami paper. Step 2: Fold the top half down to make an upside down triangle, bringing the top point to the bottom point. Step 3: Fold the left half to the right, making a smaller triangle. Step 4: Position your triangle like this, then fold the left edge to line up with the right edge. Step 5: Fold down the small triangle, lining up the edges on the right, then unfold. Step 6: Open the hole in the bigger triangle to form a pocket, then tuck the small triangle all the way in the pocket. Step 7: Put a finger in the pocket and you're done with one claw. Wasn't that easy? Step 8: Now just make one for every finger. Ever think about making paper claws? Do you have a kid who loves Wolverine, cats, or monsters? Then today's origami craft is for you! We're taking a short departure from my typical uber-cute and colorful origami projects for some more ferocious ones. RAWR! As a mom of two boys, our home is constantly the sight of roughhousing. Both had a blast pretend fighting\* with these easy-to-fold claws. So grab two sheets of paper and let's get folding! (\*And let's be honest, real fighting too... ack! Summertime shenanigans currently abound over here...) (Super, super easy and only requires 2 sheets of notebook paper!) 1. Grab 2 sheets of paper and a pair of scissors. (One sheet of paper will make 8 claws. If you want enough to make 10 claws, you'll need 2 sheets of paper.) 2. Fold a paper in half lengthwise. (Hot dog way- as my son calls it.) 3. Fold it in half again. 4. Fold it in half again. 5. Unfold it again and you'll have 8 equally sized rectangles (for 8 claws.) Cut along the lines to make 8 tiny rectangles. Grab one of your tiny rectangles. 6. Fold it in half and then unfold. 7. Fold down the upper left corner of the paper so that it touches the middle fold. Then, fold the right bottom corner up so that it also touches the middle fold. 8. Mountain fold your paper along the middle (fold made in step 6). It should look like this now. 9. Fold the back flap over the front. 10. Fold the other flap over the front. And it should look like this. (There will be an opening right where my finger is pointing. Stick your finger in it to make a claw.) Repeat this 4 or 9 more times to give yourself a whole hand or two hands worth of claws! RAWR! Check out the links below! Origami Captain Underpants Origami School Bus Origami Yoda Origami Pikachu \*aka fighting... ack! No Sew, T-shirt Ninja Mask Cardboard Ninja Throwing Stars Happy making, friends! 1 Place the paper on a flat surface. Position the paper vertically (portrait). You can use any type of paper you have lying around the house. If you want sturdier claws, then use thicker paper. 2 Fold the top right corner over and down. Align the fold to the paper's bottom. The left side of the sheet now has a point. Advertisement 3 Fold the point to the opposite corner. It should look like a rectangle that is missing a corner. 4 Fold the diagonal edge at the top part down. Align the top edge to the diagonal edge. This should now be in the shape of a square. Position the paper with the right angle of the triangle pointing up, or away from you. 5 Create a triangle. Fold the square along the diagonal line. This should create a triangle. 6 Fold the paper in half. Imagine a vertical line dividing the triangle in half, from the point to the base, right down the middle. You're creating a right triangle. You may want to draw this line in pencil the first couple of times. Use a T-square to make sure the line down the middle is at a right angle to the base of the triangle. This fold is to form a crease that will be important for the following fold. 7 Fold the left side into the crease. Unfold the recently formed right triangle and fold the two edged side directly to the half-way line of the triangle. The fold's outer edge should be going straight down, perpendicular to the bottom and even extending below the bottom of your triangle. 8 Repeat the previous fold two more times. Fold the same side over itself again. You should be able to see the claw coming into form. Be careful to line each fold with your imaginary pencil line. Make sure you keep each fold very tight and at the same angle. If the folds start to slant upwards, instead of staying aligned, the claw won't be as sturdy. 9 Tuck the bottom flap into the end. You may need to open the hole for the flap up with your finger. Hold it so the opening is visible and easy to insert one flap. 10 Open the smaller triangle in the middle of the folds. Simply stick your finger into the smaller triangle to open it up. This will look like a knuckle for the claw. It may be a tight fit at first. The tighter the fit the more likely the claw will stay on your finger. Advertisement 1 Buy or construct origami paper. To make origami paper, orient a standard sized paper (8.5x11) longways and fold a corner farthest to the opposite edge. Then cut off the excess part of the paper that wasn't covered by this fold. This will create a square. Sturdier paper will increase the the durability. 2 Fold the paper in half. Imagine a line running from the top-left corner going to the bottom-right corner. Fold along this line to create a right triangle.[1] 3 Fold the paper on the diagonal axis. You are turning your right triangle into an scalene triangle. Make sure the crease is strong. 4 Fold the paper on a diagonal axis, again. The line that you are folding now will start from one corner, and will end in the middle of the other two corners. Continue to ensure that your creases are strong. 5 Make a vertical valley fold.[2] Position the claw in front of you so the pointiest "nail" faces left. Imagine a line descending straight from the top tip to the bottom. Fold the smaller corner towards the "nail." Then unfold this fold. 6 Tuck the right tip into the pocket.[3] By making the vertical valley fold, you've allowed a pocket to be formed. This is where your finger will go. Advertisement 1 Place the paper on a flat surface. Position the paper horizontally. You can use any type of paper you have lying around the house. If you want sturdier claws, then use thicker paper. 2 Fold the top left corner over and down. Align the fold to the paper's bottom. The left side of the sheet now has a point. 3 Fold the two corners on the right side. Only fold these corners to the line of the previous fold. This will create two smaller triangles.[4] 4 Fold the left point over. Imagine this right triangle without the other two triangles. Just fold the right tip to the opposite tip of the right triangle. 5 Use the excess strip. Fold the excess strip with the two smaller triangles up onto the other triangle. This will form a triangle with this recent fold on top of it. 6 Fold the paper in half. Imagine a vertical line dividing the triangle in half, from the point to the base, right down the middle. You're creating a right triangle. This fold is to form a crease that will be important for the following fold. 7 Fold the left side into the crease. Unfold the recently formed right triangle and fold the two folded edges directly to the half-way line of the triangle. The fold's outer edge should be going straight down, perpendicular to the bottom and even extending below the bottom of your triangle. 8 Repeat the previous fold two more times. Fold the same side over itself again. You should be able to see the claw coming into form. 9 Tuck the bottom flap into the end. You may need to open the hole for the flap up with your finger. Hold it so the opening is visible and easy to insert one flap. 10 Open the smaller triangle in the middle of the folds. Simply stick your finger into the smaller triangle to open it up. This will look like a knuckle for the claw. Advertisement Add New Question Question Can you make them bigger or smaller? Yes, you should make them the right sizes to fit your fingers. To make them bigger or smaller, just start with a bigger or smaller piece of paper. Question Can I use construction paper? Yes, if the paper has the correct dimensions. Question Are these hard to make? I tried it and it did not seem hard to make. However, everyone is different. If it is too hard for you to make this, then I suggest you practice simple origami. Question Can I use any kind of paper? It depends if you want the claws thick or thin. I advise you to use thin paper. Question Do you think kids could make these claws? Yes! Question Do you think that someone could do this on their first try? I think so, but origami does take a lot of practice. Just try your best and don't be disappointed if you don't get it right the first time. Question Are there any other ways to make paper claws? Yes, there are, but they are almost the same as the first and third ones, with just a few different folds. Question Can the claws hurt someone? Possibly. As with anything, be careful how you use them. Question This is hard and I get really confused. What should I do? Watching a video on how to do it may be easier than looking at the steps. Try looking up "Origami Claws" on YouTube! Question Is there a better explanation for step 6 in method 1? Take the triangle you created and just fold it in half so that the two bottom corners touch.
